Manual Account Configuration – Iphone iOS 9.2

To set up Private Email account via IMAP protocol, do the following:

Open Settings of your IPhone device and tap on Mail, Contacts, Calendars menu.
Tap on Add Account in the center of the screen:

On the next screen you will need to add the following details:

Username: your username (shorten the email address entered earlier so it will contain just the user name not your full email @ address)

Password: password for this mailbox

Server: imaps.hevra.haifa.ac.il
Please tap on Advanced.
The next screen will prompt you to enter your incoming settings. Make sure to choose Use SSL and Server Port 993.

You may now begin writing and checking your mail.
